AMS 102 Section 7 MIDTERM I

3/1/2012

Instructions:

There is a total of **50 possible points** in this exam + an extra credit question of up to **5 points**.

PLEASE SHOW ALL WORK. Credit WILL NOT be given if a reasonable amount of work is not shown and partial credit cannot be awarded unless work is shown.

You are **ALLOWED** to use any **a 1 sided 8.5x11 hand written cheat sheet** during the exam, as well as a **CALCULATOR**.

NO CELL PHONES OR COMPUTERS.

You will be given **1:30** mins to complete the exam. I will provide updates to time on the board.

Take your time, try your best. **GOOD LUCK!!!**

NAME: _____

ID: _____

(12 Points) **Matching**

Next to each description/definition below, write the letter of the most appropriate term from the list of terms in the box.

A) Blind Study	**G)** Response Bias
B) Convenience Sampling Bias	**H)** Retrospective Study
C) Double-Blind Study	**I)** Simple Random Sampling
D) Levels	**J)** Stratified Sampling
E) Non-Response Bias	**K)** Systematic Sampling
F) Prospective Study	**L)** Treatments

_____ An observational study where you rely on events and information that have already occurred in the past to collect your data.

_____ The different values that your explanatory variable can take on during an experiment.

_____ The type of study where subjects don't know which treatment group they have been assigned and where the researchers measuring the subjects' responses don't know which treatment group the subjects have been assigned to.

_____ The type of sampling where you order your data into a list, randomly select a starting point and take every kth observation from the list after that.

_____ A type of bias that can arise when you rely on the subjects who are selected to respond via text/email in order to obtain data from them.

_____ What the cells in a design-layout table represents (i.e. the interaction of values of your explanatory variables).

1) (13 points) I am interested in the average length of time students spend studying for an exam. Assume that my population consists of the entire class (30 students) listed in the table below. Their study times are also listed below.

ID	Name	Mins		ID	Name	Mins		ID	Name	Mins
1	Alice	169		**11**	Kelly	164		**21**	Abby	151
2	Ben	113		**12**	Lisa	142		**22**	Betty	190
3	Claire	172		**13**	Mark	149		**23**	Clark	112
4	Dave	128		**14**	Nate	170		**24**	Doug	100
5	Emily	132		**15**	Owen	170		**25**	Eric	193
6	Frank	115		**16**	Polly	133		**26**	Josh	198
7	Greg	136		**17**	Rachel	188		**27**	Jen	150
8	Harold	121		**18**	Samuel	179		**28**	Patrick	168
9	Irene	182		**19**	Tommy	154		**29**	Sally	168
10	Janice	180		**20**	Vicky	109		**30**	Walt	137

a) (4 points) Using a **Simple Random Sampling (SRS)** technique, **sample 6 students** from the class using **Row 50** from the attached Random number table. **Which 6 students** are included in your **sample?**

b) (3 points) What is the **average amount of minutes spent studying** for the students in your **sample?**

c) (2 points) What **type of variable** is **Minutes Studying**? **Be as specific as possible!**

d) (4 points) Based on the type of variable you answered in part c), **draw/sketch a graphical display** for the **6 students in your sample** from part a). (Note: With only 6 datapoints, your graphical display probably won't look very good).

2) (14 points) Consider the following dataset:

{5, 3, 4, 5, 28, 5, 13}

a) (4 points) Calculate the **Standard Deviation** for this dataset. Note: **Average = 9.**

b) (4 points) Find the **Inter-Quartile-Range (IQR)** of the above dataset.

c) (3 points) **Mathematically** determine if the dataset has any **potential outliers** and if so identify them. (Recall: You do this when you draw a modified boxplot).

d) (3 points) Is your answer for part a or part b a better report of the measure of spread of this dataset? Why?

3) (11 points) Consider the process of watching a movie. Some events associated with this process are provided below:

Event A: It makes you laugh

Event B: It makes you cry

Event C: It was boring

Event D: You enjoyed the movie

And the probabilities associated with these events are as follows.

$\boldsymbol{P(A) = 50\%}$ $\boldsymbol{P(B) = 10\%}$ $\boldsymbol{P(C) = 30\%}$ $\boldsymbol{P(D) = 60\%}$

a) (3 points) If **5% of the time**, the movie is both **boring and makes you laugh**, what is the $\boldsymbol{P(A \cup C)}$**?**

b) (2 points) What is **the probability** that the movie **did not make you cry**?

c) (3 points) You are given additional information that $\boldsymbol{P(B \mid D) = 6\%}$. Are **B** and **D independent** events? **Justify your claim**.

d) (3 points) Can the events **(C) It was boring** and **(D) You enjoyed the movie**, form a **partition? Justify your claim.**

(5 points) **EXTRA CREDIT**

You can earn at most 5 points extra credit. Answering 1 question completely will give you 5 points, or getting partial credit on both questions can earn you the 5 points.

1) We discussed in class that there were two formulas for the sample variance that were algebraically equivalent. Show this equivalence using algebra.

$$\textbf{Show} \quad \frac{\sum(x_i - \bar{x})^2}{n-1} = \frac{\sum(x_i^2) - \frac{(\sum x_i)^2}{n}}{n-1}$$

2) You are provided the following probabilities.

$$P(A) = 0.85 \qquad P(B|A) = 0.40 \qquad P(B|A^C) = 0.70$$

a) What is the $\boldsymbol{P(A^c \cap B)}$?

b) What is the $\boldsymbol{P(A \cap B^c)}$?

c) What is the $\boldsymbol{P(A^c \cap B^c)}$?
